

## keytech express becomes keytech express online

It is our goal to provide our customers with innovative solutions on the cutting edge of technology. This is the best way for us to support them in their daily work and to enable them to be free for more important tasks.

In order to reach this goal together with our customers, we must constantly question ourselves and our existing products in order to improve them.

Of course, it is always inevitable that established products fall victim to this ongoing

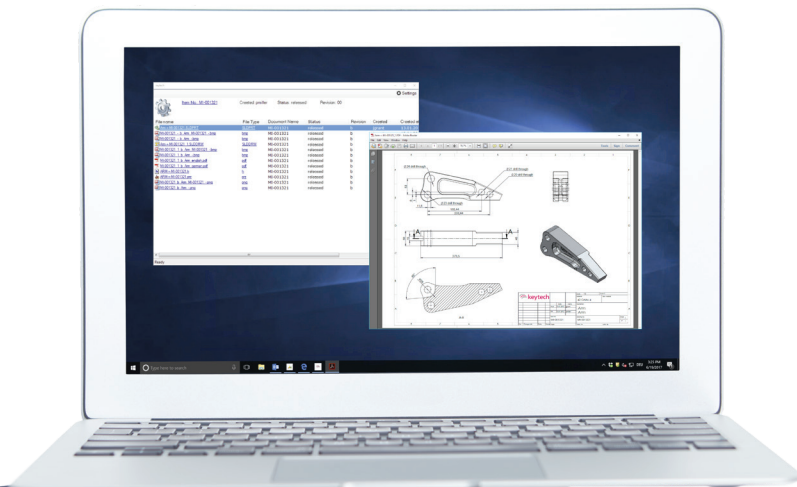

optimization process. This also now applies to the product keytech web search.

With this information we are letting you know that mentioned product will not be supported by keytech 14.

keytech express online will replace keytech express for keytech access to data files.

### **Exclusive for our Existing Customers – Upgrade Program**

To make the benefits of keytech express online available to as many customers as possible we are launching an exclusive upgrade program. As part of this one-time offer it will be possible for customers to exchange their current keytech express licenses at no charge for new keytech express online licenses. The original purchase price of the keytech Office licenses as well as maintenance and hotline are 100% credited as part of the upgrade.

## keytech express online – new product, new technology & many possibilities

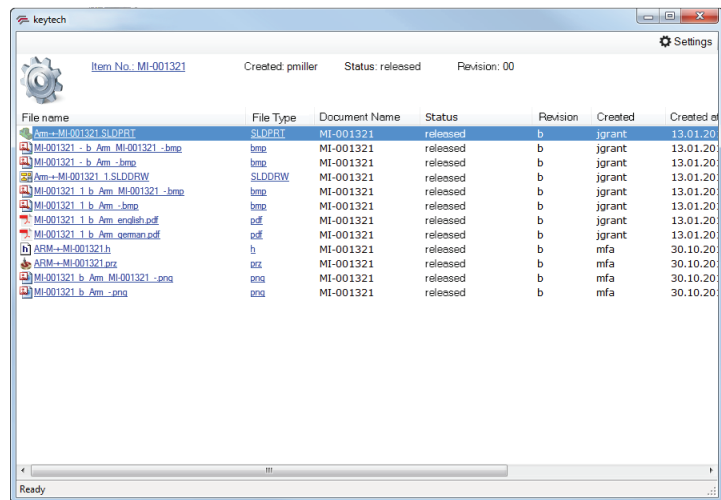

With keytech express online we have created an application that is based on the keytech web suite technology. Communication with keytech happens via our REST-based web service interface and is very suitable for communicating with other systems.

Functionally keytech express online answers all your wishes. Depending on the configuration you can, for example, display just the released drawings or also all documents linked to an item in a narrow, clear window. As with the old keytech express you use the command bar or a linked button in the partner system to call up the application.

### keytech express online as a basis for the complete web suite

We offer our customers significant value through the combination possibilities with the other solution components of keytech web suite. For example, a user might want more context to a file that he found with keytech express online. In this case he can drag & drop the item he found into keytech explorer to view it and to access

structures and metadata of the relevant items, documents or folders. In addition, proprietary solutions can be implemented by means of the keytech web api. The possibilities range from a mass import tool to integration with ERP or CRM through to putting keytech data into the company's own intranet.

The screenshot shows a window titled 'keytech' with a settings icon in the top right. Below the title bar, there is a header area with 'Item No.: MI-001321', 'Created: pmiller', 'Status: released', and 'Revision: 00'. The main area contains a table with the following columns: File name, File Type, Document Name, Status, Revision, Created, and Created at. The table lists various files associated with the item, including CAD files (SLDPRT, SLDRAW), temporary files (tmp), and PDF files (pdf, odf). The status for all files is 'released'.

File name	File Type	Document Name	Status	Revision	Created	Created at
Arm+MI-001321.SLDPRT	SLDPRT	MI-001321	released	b	jgrant	13.01.20
